

## Other Service

### Cleaning

Exhibitors must not leave packing materials and other left-over materials from moving exhibits in and out in the exhibition hall. Materials left in the exhibition hall will be disposed of by the host and the exhibitors in question will be sent a bill for disposal costs.

To apply for booth cleaning, please submit the **Form 11** to Pacifico Yokohama Clean Eco Center.

### Internet Connection Service

Free Wi-Fi access is available both in and outside of the hall at Pacifico Yokohama.

If the exhibitor wishes to have the internet service for a special purpose such as online demonstration, internet line construction is also offered for 180,000/per construction. (Excl. tax)

#### **Internet Connection Service**

A fee of 180,000 yen for one line (Excl. tax) is charged to set up an internet connection. This includes the basic fee, installation work, adapter lease, and usage fee. An invoice (debit note) for this fee will be sent to the exhibitor by Murayama Inc. before the exhibition. The line can be used from 12:00PM (noon) on Sunday, October 15.

All applications must be received by the deadline of August 18. Late applications will not be accepted.

### Cautionary Points for Internet Use:

The Internet service provided by the hall works best at a baud rate of 200Mbps. It is not compatible with high-speed communications. Communications speed may be reduced according to connection status, and there is a possibility of connection failure.

- NTT Communications Service is the only Internet service provider used by the exhibition.
- The service provided is the NTT Communications FLET'S Family type which uses an optical cable network (OCN). The OCN FLET'S Family type service operates in the same manner as a dial-up connection by using a timing-type IP address allocation that differs from the user's IP address.
- Please use a mainline at the terminal end of the Internet line.
- Murayama Inc. will install a UTP cable in the booth on request. Contact Murayama Inc. for more information.)
- The interface for the booths is a 10 BASE-T or 100 BASE-T type. Please use a PC with an Ethernet port and LAN card to be compatible.
- It is understood that the exhibitor is responsible for data security and preventing the invasion of computer viruses through the Internet. It is recommended that all computers brought in by exhibitors have the latest virus detection software installed.
- Exhibitors who wish to have an Internet connection with different specifications than those noted above should contact Murayama Inc.

(For your inquires, Pacifico Yokohama technical team may reply to you on behalf of Murayama Inc.)
